

From cut taps to form taps, extended lengths to different coatings, EMUGE-FRANKLIN, the inventor and leader of high performance multi-purpose tap, offers the broadest line in the industry.

MultiTAP cuts a wide range of materials - carbon steel, steel alloys, stainless steel, aluminum, cast iron, copper, brass, and bronze. And **MultiTAP** is uniquely designed to produce threads within both 2B and 3B classes of fit, eliminating the guesswork required when calculating H-limits.

MultiTAP features an innovative geometric design and a special base material and surface treatment, allow it to handle numerous materials and applications. EMUGE-FRANKLIN has designed MultiTAP as an affordable yet high performance tapping solution.

MultiTAP will significantly improve thread quality and boost output while reducing production costs, handling most common materials and applications. **MultiTAP** eliminates the need to stock numerous types of taps in the tool crib.

UNC-PLUG STYLE - 2B/3B Class of Fit
