ELEVATING SAFETY WITH PERFORMANCE AND QUALITY

www.BHID.com

In a recent eyewear survey by MCR Safety conducted with end-users, 60% of all participants listed anti-fog as the #1 crucial buying decision when selecting safety glasses. While fog will not hurt your eyes, it will hurt your visibility and project a distorted view, which can cause severe accidents and injuries. Often, fogging causes workers to take off their glasses or permanently stop wearing their safety glasses altogether. Both scenarios put the worker at risk, as the impact from flying projectiles or chemical splashes can damage the eyes within seconds. This also adds up to a company being potentially exposed to increased medical claims, lost productivity, and lost profits. Wearing the correct safety glasses makes good sense for both the company and the worker.

90+ Skus Available

DURAMASS[®]
**Scratch Resistant
 Lens Coating**

100+ Skus Available

20+ Skus Available

UV-AF[®] Coating:

MCR Safety is the first company to offer safety glasses that have been UV cured, improving both anti-fog performance and durability. The anti-fog technology, shortened to UV-AF, describes the very essence of the coating itself, making it easier for users to remember and to more easily identify UV cured safety glasses. This technology is now available in our Checklite and Bearkat styles.

Duramass[®] Coating:

- Our standard scratch resistant coating
- Clear hard coating provides scratch resistance properties to polycarbonate lenses
- Standard industry quality and abrasion performance

MAX6[®] Coating:

- Superior Anti-Fog Coating provides 6X greater Anti-Fog Performance when compared to standard Anti-Fog styles.
- In Extreme Fogging Conditions, MAX6[®] remains clear or fogs for no more than 10 seconds, while current industry AF offerings take 60 seconds longer to dissipate.
- Passes ANSI Z87.1 anti-fog test.
- Passes EN166 N mark test for Anti-Fog. 60 Seconds or Longer To Dissipate.

MAX36[™] Coating:

- All of the features of MAX6[®] Coating above, with a second coating included.
- Superior Anti-Scratch Coating provides 3X greater scratch resistance when compared to standard Anti-Scratch styles.

CL110

Checklite® CL1 Series

- Smaller frame sized to fit smaller faces
- Lightweight glasses (22.9 grams)
- Rugged polycarbonate lens
- Exclusive Duramass® scratch resistant coating

VL2 Photochromic Safety Glasses

- 81% to 14% VLT
- Clear to gray in 30 seconds
- Streamlined 3-point ratcheting temples
- Soft shell storage case included

Product #	Lens Color	Coating	BHID Price
MCRSAF VL220PCPF	Photochromatic	MAX 6 Duramass®	\$37.53

Transition amount per second

Gray to Clear Time	0s	10s	30s	40s	50s	60s	70s
VLT%	14.4	20.3	33.7	39.6	44.7	48.9	53.5
Gray to Clear (cont.)	80s	90s	100s	110s	120s	130s	140s
VLT%	57.1	60.1	62.7	64.9	66.8	68.4	69.8
Clear to Gray Time	0s	5s	10s	15s	20s	25s	30s
VLT%	84.8	48	28.5	20.5	18.4	16.8	15.8

What is VLT?

Visual Light Transmission (VLT) is a measurement that determines how much visible light passes through a lens to your eye. The greater the number of VLT %, the more light, and the smaller the number, the lesser amount of visible light.

KD710

Klondike® KD7 Series

- Black Frame, Gray and Black Temples
- Extremely Low Profile and Lightweight
- Zero Removable Parts
- Streamlined permanently bonded TPR temple
